

Master of Science in Technology Management (MSTM)

The one-year, STEM-designated MS in Technology Management degree from Gies College of Business is themed in innovation and business leadership.

Program caters to where you are in your career

This program offers two cohorts based on where you are in your career. There is a graduate cohort for recent graduates with less than two years of work experience and a professional cohort for more experienced candidates with two or more years of work experience. Coursework is the same but the cohort approach allows for engagement and interaction for students with similar experiences and stages of their career.

Gain hands-on experience

Hands-on learning experiences abound in this program. In addition to numerous extra curricular opportunities to gain valuable skills, a practicum is built into the curriculum to allow students to apply the things they have learned in class to business problem. Students are also able to do a summer internship instead of the practicum project if they are able to secure one.
